The attached report was from when DRMS closed it . ER's task was to reopen it, and because ER knew it was something to be figured out as we went, ER placed a RFQ that selected a subcontractor for time and materials work. The subcontractor approach was the result of a meeting this winter at the subcontractor's office attended by the OSC, DRMS and the ER RM.

However the subcontractor selected was not scheduled to start until access to the mine was open. The sub was tentatively scheduled for 8/14.

Subject: Gold king mine - DRMS adit closure

Matt, Jeff and Allen,

The attached report explains / shows the DRMS closure project. It provides a little

perspective on the elevations and the piping, but it does not reveal the conditions that we are seeing.

The stinger pipe would suggest that the block was penetrated to relieve pressure and get drainage into the PVC (24") pipe.

If other ideas come to mind – let me know.

Steve
